

New ADA playground law is mandatory as of March 15, 2012.

"A Safer Tomorrow, Begins Today!"

Here's how to comply!

Effective March 15, 2012 new and renovated playground surfaces must pass ASTM Standards for impact protection (F1292) and wheelchair access (F1951).

Follow the steps below to ensure ADA compliance with your DynaCushion / Beveled DynaCushion / DynaMat / E-Z Brick / TireSwing Wear Mat / Spinner Wear Mat / Merry Go Round Mat System.

1. Place Wear Mats under all swings, slide exits, and other high traffic areas.

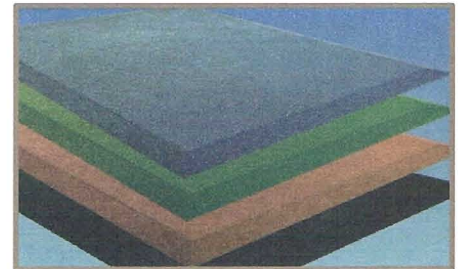

DynaCushion Wear Mats prevent rut areas under swings and at slide exits and other high traffic use areas. This is vital for ADA compliance. DynaCushion Wear Mats are also available with beveled edges for easy accessibility.

2. Maintain your playground area regularly.

Refer to our specification and installation guidelines to ensure that your playground area is maintained according to guidelines.

3. Accessibility to your playground area.

New law mandates that access to all public playgrounds must be provided. The Beveled DynaCushion Wear Mat and the Beveled Surface Wear Mat can be used in conjunction with the DynaCurb borders to create access to any playground area.
